INDUSTRY-GOVERNMENT TRAINING PARTNERSHIP: Maryland AGC is pleased to announce that the U.S. Army Corp of Engineers' course "Construction Quality Management for Contractors" is being offered in partnership with local construction management components of the U. S. Army Corps of Engineers and the Naval Facilities Engineering Command. The Corps' Baltimore District, and the Naval Facilities Engineering Command, Washington, D.C. will provide the instruction.

COURSE SATISFIES GOVERNMENT REQUIREMENTS: The Course offers prospective Quality Control Managers/Representatives and construction managers the opportunity to satisfy the CQM training requirement specified in most Corps and NAVFAC construction contracts. The Contractor Quality Control (CQC) requirements and the government's Quality Assurance (QA) role are reviewed. A course certificate will be awarded to those who satisfactorily complete the training and pass the test.

ACHIEVING CONSTRUCTION QUALITY: The mutual goal of contractors and the government is to achieve a quality product, safely, on time for a satisfied customer. Quality management succeeds through a partnership between the contractor and the government. The Contractor is responsible for daily quality, while government QA helps ensure that the contractor's program is effective.

OPPORTUNITY: Construction contractors enhance their opportunity for Department of Defense business by maintaining a strong project Quality Control program. Schedule goals are achieved through proactive contractor leadership that "builds it right the first time", avoiding costly rework. Effective quality control supports worker pride, results in favorable recognition and has the potential to increase the profit margin for contractors. Quality performance can help the contractor earn repeat business.
